Attn: Mr. Warren Casperson

Dear Warren;

I have been telling people about Enviro-Save for a long time now and thought it was time to write you a letter.

I have used your Powertrain Protection products on many vehicles over the years and swear by the excellent results. There are two specific examples I would like to tell you about.

The first is with the use in my own Honda, which was treated at 10,000 kms. I sold the car at 507,000 kms. Prior to releasing the car I performed a compression test and 3 of the 4 cylinders were still working at 100% of spec, except #3 cylinder which was at 95%. I never had to replace any engine components while I owned the car.

The second incident involved a small Perkins Diesel Engine for our forklift consistently overdriven by an aggressive company employee. He always ran it to the max, often overheating, and when he turned it off the engine crackled and popped from the heat. Before the employee could do any long-term damage, I treated the Perkins right away with Enviro-Save. We ended up with 21,000 hours on the engine after being "totally fried", prior to replacing it, without any repairs or major overhauls. Very interesting results, I thought you would like to know about.

Sincerely;

Ron Malm
