Dear Rob Ridpath,

I wanted to give you an update about the EnviroSave Oil Treatment product that I purchased from you back in July of 1997 for my 1988 Honda Civic. The Honda then had 99836 miles on it, and had been given regular oil changes every 3000 miles. After the EnviroSave Oil treatment, I immediately noticed that the engine ran smoother than when it was new. And its fuel efficiency improved by almost 10 full miles per gallon. I also had a Compression Check done on the engine then which showed all four cylinders at 160 psi, which is standard for Honda's 1.6 liter motor.

After 8 years and many more regular oil changes the Honda Civic is still running strong! Recently, at 225 thousand miles I had to have the oil pan changed as the drain hole had become stripped from regular repeated oil changes. The mechanic at Sims Honda (1-800-745-7467) where I have all my Honda service done commented that he had never seen a oil pan so clean after 16 years of continuous driving. Amazingly it was still shiny clean and he wondered what oil treatment I had used. He listed off a few such as Amsoil and DuraLube, but had never heard of EnviroSave. He said that it obviously was working and the engine Compression Check I had requested still showed all four cylinders at 160 psi! He commented usually after so many miles the engine will lose compression because of wear, but this was indeed not the case.

As I continue to drive my 16 year old 1988 Honda Civic Hatchback, I'm happy that you introduced me to this performance product. It has definitely extended the life of the engine, and was a wise investment that has paid for itself many miles over. People are always amazed that I've never had any to have any engine service performed and I still get over 40 miles per gallon.

You've made me a believer in this amazing product!
