Attention: Warren Casperson

Dear Warren,

I hope you are doing great and I see you have a new Enviro Save website up.

Over the years I have used Enviro Save in eight automobiles and wanted to send the following Finning Caterpillar oil sample analysis reports to you. While I was spring cleaning I found the before and after treatment oil analysis from the first vehicle I had treated with Enviro-Save in 1992, it was a GMC Sunrunner. We did the treatment at 5555kms and took an oil sample with the engine running and for a quick reference the oil analysis results were:

5555kms	Iron - 19	Aluminum - 14	Copper - 14	Chrome - 0.7
11240kms	9	4	4	0.0
16694kms	6	2	5	0.0
22451kms	8	3	3	0.0
42538kms	5	2	8	0.0
48416kms	7	2	8	0.0

The oil analysis results certainly confirmed Enviro-Save reduces wear in engines and over the years of treating my autos I never experienced any failures or problems and I always got great fuel mileage. Unfortunately my Sunrunner was in an accident and ended up in the Fraser River and was written off so we couldn't continue with the oil samples.

My newest treated car is a Mustang convertible and since buying it my driving routes have been very consistent, unlike previous years when I worked in the local movie business and was driving all over the lower mainland. My new job and driving route made it easy to track fuel mileage and after Enviro Save my fuel savings was between 12% to 15%.

I have sent you the Finning Caterpillar oil analysis reports so you have them on file.

Thanks again for the treatment in my car.

Sincerely

Kimberley Lozinski
