Enviro-save
7675 Edmonds St.
Burnaby, B.C.

Dear Warren,

I have been riding for over 30 years and have always maintained, rebuilt and repaired my own motorcycles, cars and trucks. It has been 1½ years since I treated my 82 FLH Harley Davidson with your Enviro save Powertrain Protection Kit and I wanted to inform you about the changes I noticed.

I split the 500ml engine treatment in two applications, due to the dry sump capacity, poured the treatment into the gas tank and treated the transmission and primary with gear treatment, then rode for two hours.

I noticed the following changes before returning from my ride: my Hog motor was much more responsive, temperature reduction of 30 – 50 degrees - to the point you could put your hand on the Rocker Box after a two hour ride in the hot summer weather. In the fall I found it started much easier in cold weather. I have no idea about fuel savings because I don't care about how much fuel I burn in my Hog.

The semi-truck I drive changed substantially after treating - over 8% fuel savings with a 400 Cummins, transmission shifts easier, operating temperature reductions and noticeably smoother. My other experiences with Enviro save, including friends, have all been very positive and consistent and I don't hesitate to recommend the product.

Appreciative customer,

Bryan Birch
