Re: Enviro-Save Metal Treatment.  
Attention: Alvin Stedel  
Dawson Creek, B.C.

Hi Alvin;

We have treated a few units over this summer with Enviro-Save Metal Treatment. A D8N Cat, 772D John Deer Grader, Engine and hydraulics on a Versatile, a few vehicles and a 2007 IHC Tandem with 550 hp Cat engine. We also treated the wheel bearings on the tri-axel cattle liner that this truck pulls.

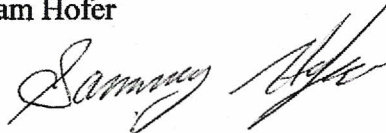

So far we are very pleased. We had treated a suburban several years ago while we where still in our old colony (South Peace) and we put over 500,000 km on it and then sold it. We still see it running around in Dawson Creek. Who knows how many miles it has on it now.

The 2007 IHC makes regular trips to Red Deer hauling livestock, it is a return trip of 1564 km. the average fuel consumption was 815 L.. Since treating the power train and the trailer bearings our average is only 745 L,. That is a decrease in fuel consumption of 80 L. (\$70.00) per trip (from 5.196 to 5.67 mpg) about 9%. We know Enviro-Save saves fuel and the reason it saves fuel is because there is less wear.

Near as we can tell, everything you have told us about Enviro-Save is true. We plan to treat other units.

I can be reached at 250-219-3343
