Attn: Steve Flecker

Dear Steve:

When first introduced to the Enviro Save Metal Treatment product line, I was told to expect an average 50% reduction in engine metal wear due to reduced friction. Enviro Save has far exceeded that expectation. The following are a few cases in point.

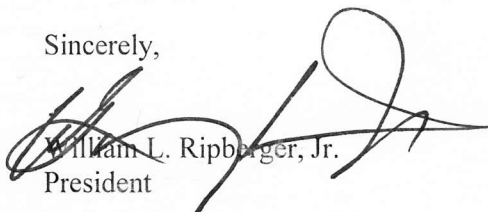

We have realized a 97.5% reduction in metal wear on a John Deere 310SG backhoe. On another John Deere 310SG we have seen an initial 50% reduction in wear metals and are awaiting new oil sample analysis test results. Engine metal wear was reduced on a Ford F-550 Super Duty 6 liter diesel service truck by 64%. In each case the operators have reported an increase in power, and smoother, quieter operation.

The hydraulic systems on our equipment are running smoother and quieter. It makes sense that they would, once you reduce friction, you reduce temperatures and metal wear.

As opposed to additives that have to be constantly introduced into the equipment, Enviro-Save is a "ONE TIME" treatment that is good for the life of the equipment. Because of this product I fully expect to realize a significant extension in the life of my equipment.

Without reservation, I highly recommend Enviro Save.

Sincerely,

William L. Ripberger, Jr.
President
