ATTN : Warren Casperson

Dear Warren;

Being an avid user of Enviro -Save products for many years, I thought I might try your hydraulic treatment in my B7100 Kubota tractor. There has always been a problem with the front end loader. If you were to stop the tractor and leave the bucket up off the ground , it would slowly creep to the ground within about thirty minutes.

I applied the hydraulic treatment to the reservoir as per volume on the label. I was amazed to see that in two days of using the machine the bucket would stay up over night with almost no movement at all.

After a week of normal usage I found that the hydraulic pump has become much less noisy and overall seemed to run much smoother.

My overall assessment of the hydraulic treatment is , I am very impressed!

I also want you to know that I have treated the engine with your diesel treatment, and have noticed a general overall increase in performance. I will also send you copies of the oil samples I have taken from the engine at a later date. But first, I must put more hours on the machine and take a final sample.

Yours Sincerely,

Greg Sparkes
