

Enviro-Save Distribution & Mfg Inc.

Our Philosophy: To manufacture and market a variety of products which are of the highest quality possible that will save consumers money in various ways and also to be part of the solution in reducing global pollution. Our experience has proven that by using our products we can all help humanity.

Company Name & Logo: When we originally chose the name “Enviro-Save” as our company and product name, the word “Enviro” illustrated our desire to help the environment. Our concerns, coupled with the need to always be good stewards of the earth and environment are reasons for the company name “Enviro” in larger font. The word “Save” establishes financial savings in various ways that enhances lives by reducing expenditures. The colored logo in its entirety is meant to illustrate clear Blue Sky, Clean Water and Green Vegetation with the Red Maple Leaf signifying Canada.

The Company: Enviro-Save is a privately held corporation operated and duly registered in the Province of British Columbia, Canada since 1990. The company manufactures and markets its proprietary formulated products such as Enviro-Save Engine & Powertrain Protection Metal Treatment and other products that are beneficial to consumers and the environment. The attributes of the “Metal Treatment” are such that it permanently impregnates all lubricated friction bearing surfaces in all types of engines, transmissions, differentials, equipment and machinery, where opposing friction surfaces wear, which costs money. We thrive on helping people, and reducing costs and global pollution.

Location: The manufacturing facility and warehouse are located at 410 Canfor Avenue, New Westminster, British Columbia, Canada V3L 5G2.

Research & Development: The location also houses a laboratory to maintain a high level of product quality and integrity with a constant promotion of further product development and refinement. Other areas of constant development are increasing the threshold of chemistry during the production and manufacturing of concentrates, utilizing various stainless steel blending, mixing and storage tanks.

Sales & Marketing: Enviro-Save has a network of established Distributors in various segments of the Automotive and Trucking Industries. Currently our products are exported globally while continuing to seek qualified and established Distributors who want to become part of an environmental solution that will also help people reduce their costs. We welcome all domestic and international Distributor inquiries, individuals or companies to contact us. Our web site address is www.envirosaveglobal.com.

Products: Most companies in this aftermarket industry are in the repetitive use, Oil Additive, segment of the market and claim their products produce similar if not better results. However, our company policy has stood by irrefutable third party proof from utilizing scientific oil sample analysis reports, so the benefits of using Enviro-Save products are always a positive experience when performance data is factual. Third party tests and testimonials since 1990 have consistently reported and provided excellent proof that Enviro-Save Metal Treatment performance is superior. The product provides a complete and permanent solution to reducing friction, drag and wear.

All Enviro-Save products were thoroughly researched and technically formulated by a Tribologist, Lubrication Engineers, Mechanical Engineer and engine rebuilders to provide the safest, most compatible and effective treatment for each mechanical component being treated. It is a fact that today's excellent and sophisticated lubricants provide an optimum anti-friction environment within the performance limits of any separately applied lubricant or medium. It is also a fact that it is still possible to obtain additional benefits within the sphere of friction and wear reducing lubricants when the lubricated bearing surfaces are made smoother. It is also a fact that all surfaces on earth are rough, and when bearing surfaces are viewed through a microscope the bearing surfaces are rough, at Enviro-Save we technically refer to those rough surfaces as "the bearing surface asperity". The Enviro-Save Technical Information Sheet has a picture of a new crankshaft bearing surface, and cross section pictures at 4500 times magnification, which makes it very easy to understand smoother lubricated bearing surfaces have less friction, drag, wear and oil turbulence. The above factual information and all performance claims for Enviro-Save are backed by records of third party Scientific Oil Sample Analysis Reports that historically confirm a conservative average decrease in metal wear rates by 50%. It is a fact that friction causes wear, and when wear metal rates are reduced; friction is reduced, less drag, less heat generated, less vibration, noise reduction, fuel consumption is reduced, resulting in greater fuel efficiency, higher mileage and longer life. Since 1990, it is very common to double or triple the normal life of engines, transmissions, differentials, hydraulic systems and every other component that has been treated with Enviro-Save.

There are only two methods of reducing friction and wear in lubricated mechanical components; 1) use better lubricants, 2) make the bearing surfaces smoother – Which is the function Enviro-Save performs with one application and Enviro-Save does not change or alter the characteristics of oils and lubricants, it simply uses oils as a carrier for the treatment. The permanent micro resin impregnation process and benefits are for life, unlike the repetitive use of oil additives or oil treatments. Friction, wear and rough bearing surfaces are present in every mechanical component and providing there is adequate Enviro-Save treatment, the micro resin impregnation process performs its function every time it is applied. Small components with low friction may require sophisticated measuring devices or oil sample analysis to confirm the normal benefits from using Enviro-Save Metal Treatment.

Powertrain Protection Kits: The ultimate way to maximize reducing operating costs through fuel savings, extending component life and reducing maintenance costs, and help reduce global pollution, is to use the unique Enviro-Save Powertrain Protection Kits. All Kits include treatment for every component; such as engines, transmissions, power-steering, differentials, hydraulics and gear boxes etc. The total amount of energy required to overcome friction and wear in every component is very significant and costly. Once all components in vehicles, trucks, machinery or equipment have been treated it is extremely common to instantly feel changes as operating costs are automatically reduced. Due to the high costs of operating and replacing vehicles or equipment with new computerized vehicles or equipment, many Enviro-Save customers now state how importance it is to extend the normal operating life.

Historical data since 1990 confirms the ultimate combination for reducing costs and extending life is to use an Enviro-Save Powertrain Protection Kit and high quality mineral or synthetic lubricants. Lubricants cannot make bearing surfaces smoother like Enviro-Save does with one application for life and the many benefits of the treatment provide a very safe environment for safely extending oil life. Extending oil and filter change intervals, safely, has been confirmed many times by utilizing scientific oil sample analysis results. Less wear metals and contaminants in oil confirm it is safe to extend oil life and many Enviro-Save customers report doubling oil life, which is a huge savings over time and you are helping to reduce global pollution.

Benefits Our Global Environment: Most realize our world is in serious trouble due to the massive amount of manmade pollution that is rapidly escalating globally! There are way too many blatant examples to ignore or lie about the reality of the level of pollution to our children and grandchildren. It is very difficult to imagine that the escalating pollution factor will provide a safe clean world for future generations, if pollution continues to escalate like it has and for the next 50 years.

Going GREEN has never made more sense! Enviro-Save is a true GREEN product that can do more for helping humanity, reducing global pollution and climate change than any other aftermarket product or system that is currently being marketed as "GREEN". Global fuel consumption (gasoline, diesel, propane & natural gas) could be reduced by 6% to 8%, exhaust pollution by 25% to 50+% and electricity consumption could be reduced by 6% to 10+% on electrical driven mechanical components, such as compressors, injection mould machines etc. Our conservative factual average fuel saving results since 1990: Automobiles 10%+ and Commercial Trucks, Buses and Heavy Equipment 6%+. One treatment normally doubles or triples the life of all lubricated mechanical components and the R.O.I. (Return on Investment) runs into the 1000's % over the life of vehicles and equipment.

Enviro-Save is a one-time investment and one-time application that provides a life time of savings and benefits. No other product has scientific oil sample analysis results like Enviro-Save: prove wear is reduced = less friction = less drag = fuel savings = less pollution = longer oil life = increased component life and dependability. It pays for itself many times over. Our full 4 inch binder is a collection of indisputable positive test results, testimonial and performance data from a wide variety of applications, such as; Automobiles, Trucks, Boats, ATV's, Firearms, Hydraulics, H.D. Equipment, Air Tools, Dentist Drills, Power Saws & Motorcycles etc.

Contrary to what we are told and lead to believe by big oil, manufacturers and politicians, time is of essence and all of humanity must contribute to reducing pollution!
