

Hello AAOO members,

July 10, 2019

I am an owner operator and do everything I can to reduce operating and fuel costs in my 2006 Peterbilt with 1.2 million miles on it. I have always looked for an additive that would increase fuel mileage without the cost outweighing the benefit and finally found one.

This spring I was talking with my Dad and he told me about treating his Chev Durimax pickup with Enviro-Save Metal Treatment. It's a one-time investment and application for life and his mileage increased by 2 MPG, the diesel engine also ran smoother and quieter. I asked Dad where he had heard about and he said my brother has been using it in his logging truck for some time. My brother stated his fuel mileage increased and nobody else hauling logs in his area gets as good of fuel mileage, so I decided to give it a try.

The fact that it is a one-time application, unlike any other product I have heard about or used, really got my interest. So I bought the one-time application Enviro-Save Powertrain Protection kit for my truck and installed it in the; engine (includes fuel treatment), transmission, differentials, steering axle oil hubs and power-steering. I immediately noticed my engine sounded smoother, so I was happy about that. Then I did a 7000 mile round trip from Missoula Mt to Boston Ma, all the way back to Seattle and back to Missoula Mt, and my MPG went from 5.2 MPG up to just a tad over 6 MPG just in the first trip, I was so pleased with the results that I figured every owner operator should have Enviro-Save in their trucks and decided to become a Distributor for Enviro-Save.

The cost of the Enviro-Save Kit was under \$600.00 and I had my money back within about a month. Even if it would have been 2 to 3 months, I would have been extremely happy, I strongly recommend Enviro-Save to every owner operator and fleets. It's by far the best product cost to savings ratio I've ever seen or used. I have sold several Enviro-Save Kits to other OO's and their savings and experience is about the same. Reduces operating temperatures and Enviro-Save normally doubles component life.

Enviro-Save will NOT void any manufacturer's warranty, letters from Cat, Cummins, Detroit Diesel and Allison Automatic Transmissions on file stating so.

Suggested retail is \$595.00 for a Class 8 Kit and we have a special introductory price of \$545.00 until year end. We also have a Reefer Engine Kit and the BC Institute of Technology confirmed a 9.7% fuel saving @ 100% rated horse power output on a 4 cylinder Perkins diesel engine of similar size.

We look forward to hearing from you and please do not hesitate to email or call us with any questions you may have, the owner of Enviro-Save was raised around trucks and heavy equipment so all questions are answered.

Yours truly,

Wayne Dyck
